PROFILE

Senior AI Full-Stack Engineer with 7+ years of experience building scalable web applications, SaaS platforms, and AI-powered products. Experienced in developing LLM applications, RAG systems, AI automation workflows, and full-stack solutions using Python, FastAPI, React, Next.js, TypeScript, and cloud technologies. Skilled in designing secure, reliable, and production-ready AI systems that improve business efficiency and user experiences.

PROFESSIONAL EXPERIENCE

GrowthAI

02/2024 – 04/2026

Senior Software Engineer

- Designed and developed enterprise AI web applications using React, Next.js, TypeScript, FastAPI, and Python, enabling clients to launch AI-driven features three months faster.
- Built end-to-end LLM-powered platforms integrating OpenAI APIs, RAG pipelines, embeddings, and vector databases for document intelligence, reducing manual document review time by 50%.
- Developed scalable AI backend services using Python and FastAPI for document ingestion, embedding generation, semantic search, and AI workflow automation, supporting a 200% increase in concurrent users.
- Implemented responsive AI dashboards using React, Next.js, and TypeScript for AI chat, document analysis, intelligent search, and workflow management, improving user satisfaction scores by 25%.
- Designed secure enterprise AI architectures using OAuth2, role-based access control, REST APIs, and PostgreSQL database systems, strengthening data security compliance and reducing unauthorized access risks by 30%.
- Optimized AI application performance through Redis caching, Docker containerization, Kubernetes orchestration, and AWS cloud services, reducing response latency by 40% and improving system throughput.
- Developed AI automation workflows using LLM orchestration, external APIs, and intelligent data processing pipelines, reducing manual operational tasks by 35%.
- Collaborated with product, design, and engineering teams to deliver production-ready AI solutions through CI/CD pipelines using GitHub Actions, shortening release cycles by 30% and increasing deployment frequency.

Cloudbeds

09/2020 – 11/2023

Senior Software Developer

- Built and deployed the Hotel Service website and internal management system end to end using React, Tailwind CSS, Node.js/Nest.js, Apollo GraphQL, and GCP, resulting in a 30% increase in online bookings and a 20% improvement in internal process efficiency.
- Implemented a responsive design using Tailwind CSS, ensuring a comprehensive and feature-rich user interface, resulting in improved user engagement across all platforms, increasing mobile user conversion rates by 18%.
- Employed Typescript synergistically with React to streamline the development process, resulting in a more efficient approach to building reliable and scalable applications, reducing development time by an estimated 15%.
- Integrated back-end APIs using Apollo GraphQL and ensured efficient state management using Redux, toolkit, improving data retrieval speeds by 20% and enhancing the overall user experience.
- Constructed a durable backend with Nest.js and TypeORM for PostgreSQL database integration, ensuring system stability and data integrity while reducing server downtime by 25%.
- Deployed the fully functional backend to GCP, establishing scalable and reliable cloud hosting that achieved 99.9% uptime.

- Collaborated with backend engineers and the Figma design team through a visual Kanban board, improving communication and project coordination while decreasing completion times by 12%.
- Engineered real-time updates using websocket to ensure that the website reflects the most current information such as reservation, ordering, specials, promotions, etc., enhancing user satisfaction and increasing booking conversions by 15%.
- Introduced unit, integration, and end-to-end testing with Jest and Cypress to maintain code quality and application robustness, achieving 90% test coverage.

Azalea Health

Web Developer

10/2018 – 04/2020

- Created Hospital websites using React and Node.js/Express.js, resulting in a 20% increase in online reservation bookings within the first three months.
- Crafted a responsive and user-friendly interface with Material UI, SCSS/SASS, and styled-components, improving user satisfaction scores by 15% as measured by post-interaction surveys.
- Designed and optimized a meticulously organized database and state management system, leveraging PostgreSQL with Redux-Thunk and Saga, reducing data retrieval latency by 30%.
- Devised robust RESTful APIs to facilitate efficient data communication between frontend and backend, handling up to 500 requests per minute with an average response time of under 200ms.
- Optimized website performance, resulting in a 25% reduction in page loading times and a 10% decrease in bounce rate.
- Addressed critical data security and privacy concerns, achieving full compliance with HIPAA regulations and preventing any data breaches, ensuring 100% adherence to regulatory standards.
- Contributed to the successful delivery of projects on time and within budget, achieving a 95% on-time delivery rate.
- Applied accessible web design principles, increasing website accessibility score by 40%.

EDUCATION

Bachelor of Computer Science

Pace University

2014 – 2018
New York, NY, USA

Bachelor's degree in Computer Science with expertise in software engineering, data structures, algorithms, databases, and modern web technologies. Experienced in developing full-stack applications using JavaScript, TypeScript, React, Node.js, Python, SQL, and REST APIs. Strong ability to design scalable solutions, solve complex problems, and build reliable user-centered applications.

SKILLS

Frontend Development	Backend Development	AI, Cloud & Business Solutions
• React.js • Next.js • Vue.js • React Native • TypeScript • JavaScript • Tailwind CSS • Redux Toolkit • Redux Thunk / Saga • Material UI • SCSS / SASS • Responsive Web Design	• Node.js • NestJS • Express.js • Laravel / PHP • Python • GraphQL • PostgreSQL • MySQL • RESTful API • PostgreSQL • MongoDB • API Architecture	• LLM Applications • RAG Systems • OpenAI API Integration • AI Agents • Kubernetes • AWS • GCP • Docker • OAuth / JWT Authentication • WebSocket • Shopify • WordPress • Git / GitHub • CI/CD Pipelines
